NEW SNIPER
ELECTRIC NAILING
MACHINE

The New *Electric* Nailing Machine

CONSTRUCTION AND APPLICATION OF THE *NEW* SNIPER

The manual SNIPER nailing machine has a modern robust construction by the use of an electric – mechanical system for nailing pallets of various type and dimension.

It will mark a turning point for those who use manual electric guns on nailing tables.

It's a suitable solution for operating units in which it is necessary to construct high - quality pallets with high labor productivity and accurate nail pattern compared to electric guns.

Indeed, the new SNIPER allows a precise and standardized nailing for the entire duration of the nailing cycle from the first to the last hour of work.

WORK SAFETY AND WORKER CARE

The machine fulfills strict requirements for work safety stipulated by respective EC standards.

The SNIPER deletes worker stress (no human effort) and nailing inaccuracy (it's precise and error-free) kinds of problems workers would have by use of the nailing gun.
