# COMPANY PROFILE

## OUR VISION

**THERE ARE NO GOOD MATERIALS AND BAD MATERIALS BUT THERE ARE RIGHT OR WRONG BEHAVIORS.**

OUR PRODUCTS ARE ALL **REUSABLE** AND COMPLETELY **RECYCLABLE**. CORRECTLY MANAGED CAN CONTRIBUTE TO THE DECREASE OF THE ENVIRONMENTAL IMPACT: ONCE FINISHED THEIR USE OF SMOOTHING IN PLASTIC, NOT ON EARTH, IN THE RIVERS OR IN THE SEAS, THEY WILL BE LIVING NEW PRODUCTS WITHOUT FURTHER WASTE OF FOSSIL SOURCE AND EMISSION OF OTHER GREENHOUSE GASES.

BUT IT DOES NOT END HERE: THE NEW "**AMBIENTE**" LINE USES LATEST GENERATION RAW MATERIALS THAT CONTAIN **AT LEAST 60% OF RENEWABLE SOURCES** TO CONTRIBUTE FURTHER TO **DECREASE ENVIRONMENTAL IMPACT**.

# COMPANY PROFILE

## WHO WE ARE

### WHO WE ARE

Mojito design is a young and dynamic company, proud of being 100% Italian.

The company stems from the creativity and entrepreneurship of the Giovanardi family, with more than thirty years experience in working plastic materials and rubber with all kinds of inserts, from metals to stones.

#### **Tradition, craftsmanship, innovation**

Our roots are well-founded in the Italian handmade tradition. Our goal is trustworthiness, taking care of each product detail and client needs. By the project analysis we optimize the whole production process and the only limit (or almost) is your creativity. We grew up making investments in new production technologies that made us a leader in bi-injection molding.

#### **Method, evolution**

From the first blueprint to a 3D render, from molds to prototypes, to final production.

We take care of all the steps of the process, with special focus on new materials and new production techniques. This is the reason why we love to take on new challenges and to study each project to suit the client's requests.

# AMBIENTE LINE ECOLOGICAL PRODUCTS

MOJITO DESIGN products respect the new european standards as reusable and realized with **recyclable raw materials**.

Our respect for the mbiente but they went to search new materials that keeping the characteristics of our products but that at the same time reduced the environmental impact.

We have therefore introduced new polymers containing over 60% of raw materials carried out by renewable sources (mainly sugar cane) in replacing items obtained by syntetic sources as traditional polymers.

This choice meets in:

**- REDUCTION OF RESOURCES CONSUMPTION FROM FOSSIL SOURCES PRESERVING THEM FOR FUTURE GENERATIONS.**

**- REDUCTION OF GREENHOUSE GAS EMISSION**

This our proposal is to give a contribution to environmental sustainability.

**The new European directive limits (and in some cases forbids) the use of plastic for the production of disposable tableware.**

*The European Commission has approved the new rules to combat the spread of the 10 single-use plastic products "that most pollute the beaches and seas of Europe". Pearl ear cleaning sticks, cutlery, plates, straws, beverage mixers and balloon rods should be made exclusively with sustainable materials. "Faced with the constant increase of plastic waste in the oceans and seas and the consequent damage - the EU executive says - the European Commission proposes new rules for the 10 single-use plastic products that pollute the beaches and seas Europe and for lost and abandoned fishing gear These products account for 70% of marine waste ".*

# AMBIENTE LINE ECOLOGICAL PRODUCTS

RAW MATERIALS CONTAINING OVER 60% OF RENEWABLE SOURCES  
REUSABLE AND RECYCLABLE

## LIFE CYCLE ASSESSMENT (LCA)

Life Cycle Assessment (LCA) is a methodology to evaluate all environmental impacts associated with a product, considering its entire life cycle from the extraction of raw materials to its final disposal.

The LCA of APIGO BIO family (soft and hard series), evaluated on the basis of ISO 14040-14044 standards, in relation to:

- Global Warming Potential 100: measurement of the greenhouse effect ("heating of the earth") calculated over 100 years. It is also known as "carbon footprint".
- Non-Renewable Energy: the consumption of nonrenewable primary energy (oil, coal, natural gas, natural uranium).

In comparison to a fossil-based polymer present:

- 70% reduction in greenhouse gases
- 22% savings in non-renewable energy
