**IN.CO.M.** S.R.L.  
INDUSTRIA  
COSTRUZIONI  
MECCANICHE

### To whom it may concern

We'd like to introduce You to our firm, IN.CO.M SRL, a family-owned business in the Italian Marche region, specialised in the construction of industrial machines, semi-finished products and carpentry workings in iron, aluminium and stainless steel.

Company founder **Mario Campolucci** started in the early 1960s from a small carpentry activity, in time developing a firm able to work for some of the most important Italian companies in the agro-food sector, and in various other industrial sectors, such as packaging, green energy, medical, chemical and environmental sector.

Our strength lies in our technical capacities, a deep expertise in building industrial machinery and a skilled and reliable workforce. IN.CO.M has a cutting-edge industrial plant, and in the last years it has massively invested on new technologies, energy-saving measures and green-energy in-house production, along with the qualification, health and safety of its workers: we have achieved the EN 1090-1 (CE Marking), ISO 9001 (quality of processes), ISO 3834 (quality of welding processes), UNI EN-287-1 (qualification of welders), UNI EN ISO-15614-1 (qualification of welding processes) and OHSAS 18001 (qualification of safety conditions) certificates.

IN.CO.M works with prestigious Italian firms, such as Peralisi, Barilla, Loccioni, Eusebi Group, Messersì, Imesa Grupop Schiavoni, to deliver iron, aluminium and steel basins, reservoirs, tanks, belt elevators, hoppers, skids, platforms and many other things, thanks to our keen and qualified skill with transforming metals. IN.CO.M owns a 5000 square meters' space, strictly partitioned between iron, aluminium and stainless steel workings in order to guarantee the greatest possible quality of products: we also offer to our customers the skills of a qualified technical office.

Our plant works with a last-generation laser cutting machine, which can employ the latest cutting technologies, such as Lead In, Controlled Pulsed Piercing CCP or Scanning: we can work on sheets up to 2 x 4 mt, with a thickness of 20 mm for stainless steel sheets, 25 mm. for iron sheets and 12 mm. for aluminium sheets.

IN.CO.M's greatest strength is its capacity of offering to its customers a complete management of the order: our production plant is also equipped with brake presses, calenders, a sand-blasting plant, a glass-microspheres shot-peening plant and two painting plants.

We offer You our expertise, our reliability and our commitment to what we can do best: IN.CO.M is a qualified partner, with a 40-years experience and able to meet with great flexibility the requests of our customers. We'd be happy of hosting You, in case You were interested in visiting our plants, and let You touch with Your hands the quality of our work.

Looking forward to Your response,

Yours faithfully,

Giovanni Campolucci, General manager
