THE COMPANY

GICO Systems was created in Bologna (Italy) at the beginning of the '90s, as a manufacturer and installer of birds removal systems.

Owing to the strong will and commitments of its partners, to the high skills of its scientific and technical staff, to the financial support given by some major Italian industrial groups, **GICO Systems** is today a leader in disinfection and birds removal in Italy.

20 years of experience and know how,
20 years of client service,
20 years of company's growth,
20 years that allow us today to provide superior quality services.

WORKS

The constant and growing focus on the clients' needs and their increasing complexity, the long experience in environmental health, enable **GICO Systems** to find different solutions for bird removing.

GICO Systems was one of the first companies in this sector to be certified UNI EN ISO 9000 and to invest in the security and training of its personnel.

EXPERIENCE AND KNOW HOW AT YOUR SERVICE

BIRDS REMOVAL SOLUTIONS

The problem

Cities are ideal habitats for the survival and reproduction of pigeons, starlings, gulls: the vast spaces available for nesting and the large availability of food, foster the demographic of synantropic birds, those that are used to live close to man.

These birds are direct or indirect carriers of various diseases and parasites harmful to humans and animals, such as ticks and fleas as well as the cryptococcosis, histoplasmosis, the ornithosis and salmonellosis.

The contamination of the environment from bird guano, the nests in the buildings, may cause irreversible damages to structures.

A cubic meter of guano may weight up to 900kg, with high humidity content; given that under the roof there are areas up to 100-150 sqm large, any 20-30cm long slab may bear the weight of tons of guano, - a highly dangerous situation for the floors below.

The solutions

1

ELECTROSTATIC SYSTEMS

The best solution to remove permanently medium and large size birds as pigeons.

2

MECHANIC SYSTEMS

Nets
Spikes
Bird wires

3

OTHERS

Acoustic dissuaders
Services to limit pigeons
Bio-enzymatic cleaning

KNOW THE PROBLEMS AND SOLVE THEM

ELECTROSTATIC SYSTEMS

- The electrostatic system is the best solution to remove permanently medium and large size birds as pigeons or sculls
- An electric control unit generates electrostatic pulses that are sent to the system, which is made of 2 stainless steel conductors (negative and positive), divided by a special strut in polycarbonate (a long duration insulating material)
- Once the electrostatic system is put in the points most visited by the birds, and the electric control unit is calibrated and optimized, birds are totally removed from the whole area.

Churches, buildings, towers, cornices etc. our systems are adaptable to any architecture.

GUARANTEED TO WORK FOR LONG TIME

NETS

MECHANICAL SYSTEMS

- Nets are barriers that birds cannot penetrate, made of materials that resist to weather and temperature changes. They are useful to protect niches, towers, balconies, small courtyards.
- Installation is very easy wherever needed, owing to the flexible stainless steel frames.
- Invisible and highly durable in time with their fine mesh in polyethylene, woven and knotted.

■ Mechanical Systems

Wherever it is not possible to use the electrostatic system, which is more complex and effective, cheaper mechanical systems such as spikes, springs and bird wires, can be installed.

■ Spikes

Spikes are perhaps the most widespread bird removal system. Rows of stainless steel spikes are fixed on bases made of stainless steel or of transparent polycarbonate, which are then attached to the surface to be protected. Bird will have many problems to lean or rest there again.

■ Bird wires

Sophisticated mechanical system, completely invisible and highly effective. It is a steel wire with a diameter of 0.5 mm that once positioned with suitable installation supports, remove the pigeons.

LARGE SURFACES COVERAGES

OTHER SYSTEMS

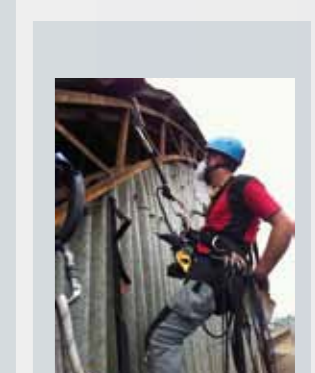

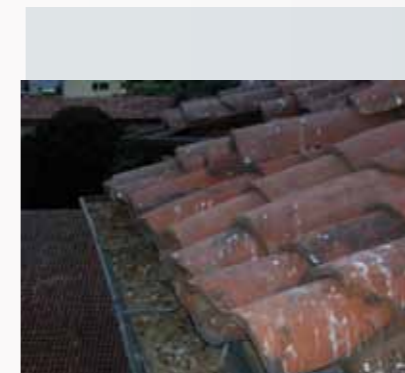

OTHER SERVICES

- **ACOUSTIC SYSTEM TO REMOVE UNDESIRED ANIMALS**
GICO VOCAL system effectively frightens and turns away undesired animals such as starlings, gulls, boars, deers etc. It is used especially in agriculture, in green areas within cities, airports, industries.
- **SERVICES TO LIMIT PIGEONS**
Birth control treatments, analysis of the groups and nesting places.

- **REMOVAL THE GUANO FROM ATTICS**
Cleaning the guano and derivatives of pigeons from attics, roofs, gutters.
- **DISINFESTATION**
Environmental sanitation, drainage from ticks and other parasites of the pigeons.
- **ROPE WORKS**

FOR A HEALTHIER ENVIRONMENT

OUR TECHNICIANS

The technical and scientific staff in **GICO Systems** is able to plan a service tailor-made and guaranteed to the client, totally safe and environment friendly.

Our technicians operate with expertise on high level and historically/artistically important buildings, often in collaboration with restorers from the Italian Ministry of Culture; they are therefore considered as the most experienced in Italy.

The combined use of ropes, mountain climbing and speleological techniques, enable us to work always and safely, in all areas difficult to reach and at affordable costs.

Costs are widely cut, as activities are carried out.

in co-operation with
Cooperativa Etabeta

Why choose us

1 TOTAL GUARANTEE

Each project is tailor-made and guaranteed to the client, totally safe and managed in any phase, from the project to the final stage of installation

2 MAINTENANCE

GICO Systems guarantees prompt assistance over time

3 SPECIALISTS BY PASSION

The technicians, work with the highest degree of respect and know how on high level/historic structures, often co-operating with restorers and public entities.
