FACILITAS IS STAINLESS STEEL

FACILITAS is an Italian based manufacturing company.

We design, manufacture and export stainless steel changing room lockers, broom and storage cupboards, stand-up desks and work tables in stainless steel for the food / food processing, dairy and pharmaceutical industry and large-scale supermarket trade.

We started business in the 1960s manufacturing metallic shelving and from the mid-1980s we started operating in the food processing sector with the production of furniture in stainless steel, becoming the first Italian manufacturer for stainless steel changing room lockers. Today our production capabilities have grown to almost 500 units per month. We work throughout Europe as well as in North and South America and in Australia.

Our customers benefit from our experience and attention to technological innovation. We have a complete offering of standard products but can also offer nonstandard bespoke products that respect our customers specific needs.

STAINLESS STEEL CHARACTERISTICS

STAINLESS STEEL, also known as inox steel or inox from the Italian word *inossidabile*, is a steel alloy with a minimum of 10.5% chromium content by mass.

APPLICATIONS

- Food processing equipment and furniture, particularly in the meat/fish/poultry processing, wine making and dairy industry.
- Professional kitchens, trough equipment and appliances (sinks, tables, fittings, railing, etc.).
- Architectural paneling, railings & trim.
- Food or chemical containers.

470LI-24Cr *Nickel free*

Belongs to the new generation of superferritic grade stainless steel. Produced by means of VOD (Vacuum Oxygen Decarburation). This particular production process ensures the achieving of excellent corrosion resistance comparable or superior to AISI 316 but at a fraction of the cost.

AISI 304

European norm 1.4301 is the most common austenitic stainless steel. Very good corrosion resistance makes this stainless steel the standard in the food industry.

AISI 441 *Nickel free*

European norm 1.4509 is a more common ferritic grade stainless steel. Good corrosion resistance, often comparable to that of general austenitic grade AISI 304 (1.4301). AISI 441 is the standard in the large-scale supermarket trade.

PREN - Pitting Resistance Equivalent Number	
Tipo Acciaio Stainless Grade	Resistenza alla corrosione Corrosion Resistance
470li-24Cr	24,50
316L	24,00
304	20,00
441	18,50
430	16,50
